Notice of the General Office of the National Health and Health Commission on the urgent listing of some disinfectants during the prevention and control of pneumonia outbreaks of new coronavirus infection

National Health Office Supervision Letter No. 2020 No. 99

The health and health committees of provinces, autonomous regions, municipalities and Xinjiang Production and Construction Corps:

The current pneumonia epidemic situation of new coronavirus infection is serious, and the supply of disinfectants is tight in some areas. In order to ensure the effective supply of disinfectants nationwide, the relevant matters are notified as follows:

1. Urgent alcohol disinfectants listed on the market can be used after being tested (or commissioned) by the product liability unit. Alcohol hand disinfectants have an alcohol active ingredient concentration > 60% (V / V), and other ethanol disinfectants. The raw materials should meet GB26373-2010 "Sanitary Requirements for Ethanol Disinfectants" and the ethanol content should be 70% -80% (V / V).

2. The chlorine-containing disinfectants, chlorine dioxide disinfectants, and peracetic acid disinfectants that are urgently listed on the market can be used after being tested (or commissioned) by the product responsible unit for the content of active ingredients and the pH in accordance with relevant health standards. The validity period of 84 disinfectant solution is limited to 3 months (except those with a stability test report).

3. For the disinfectants that have been listed on the market, if the product responsible unit increases the production line, production workshop or production site due to the expansion of its production scale, after the product responsible unit tests (or entrusts testing) the content of the active ingredients and the pH of the disinfectant meet the relevant sanitary standards, Can be used on the market.

The domestic manufacturers of emergency disinfectants listed above shall obtain a sanitation license for the disinfection product manufacturing enterprise. Before the product is put on the market, it should promptly submit the disinfectant labeling instructions and product quality and safety commitment to the local disinfection product filing

department (with a report of the active ingredient content of the disinfectant and a qualified test for pH). After importing the same imported disinfectant as the registered product, the responsible unit in China can submit the product quality and safety commitment to the local disinfection product filing department (with the foreign product's marketing certification document and inspection report) before it can be sold on the market.

When the above-mentioned emergency listed disinfectants are used in the market, the product responsible unit shall perform testing in accordance with the inspection items of WS628-2018 "Technical Requirements for Sanitary and Safety Evaluation of Disinfecting Products" and record them in accordance with regulations. After the emergency response to the prevention and control of the pneumonia epidemic of new-type coronavirus infection is over, if the product responsible unit fails to complete the inspection and filing, it shall immediately stop the production and sale of the above-mentioned emergency listed disinfectants. Those who are willing to continue production and sales shall go through the relevant formalities in accordance with the original normal procedures, otherwise they will be investigated and dealt with severely in accordance with the relevant provisions of the Law on the Prevention and Control of Infectious Diseases and the Measures for Disinfection Management.
